The object of the system is to reorganize the operation of the police department service, and make it possible to be in almost instant communication with the policemen who are walking their beats. The dask sergeant merely presses a lever and this lowers the signal arm and turns on the red light, which means that the patrolman on that beat is wanted on the phone. He may see the light a block away and can answer on any other phone, the desk sergeant being able to readjust the signal arm and turn out the light from his office after he has got into communication with the officer. It is hoped to have one of these signals installed on each beat throughout the city, and action will be taken on the matter tonight probably. The Dean system is the only one besides the signaphone that has been installed at headquarters.
